

GSM KEY Smart Controller Overview

The GSM SMART KEY is a device that allows you to open a garage door, gate or barrier using your mobile phone. It acts based on the incoming call of an authorized telephone number. The administrator can edit the list of authorized users via SMS or from PC or mobile application. Since the incoming call is not completed, opening the gate or garage door is done for free.

Operating your devices

Features of GSM KEY

- Free operation
- Strong security
- Convenient operation
- Managing users on your phone or PC

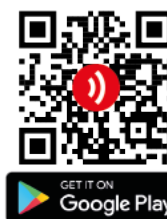

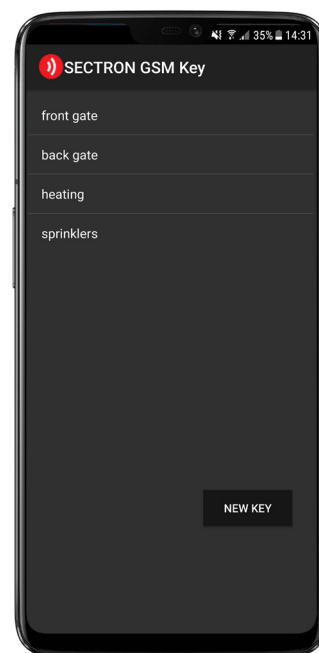

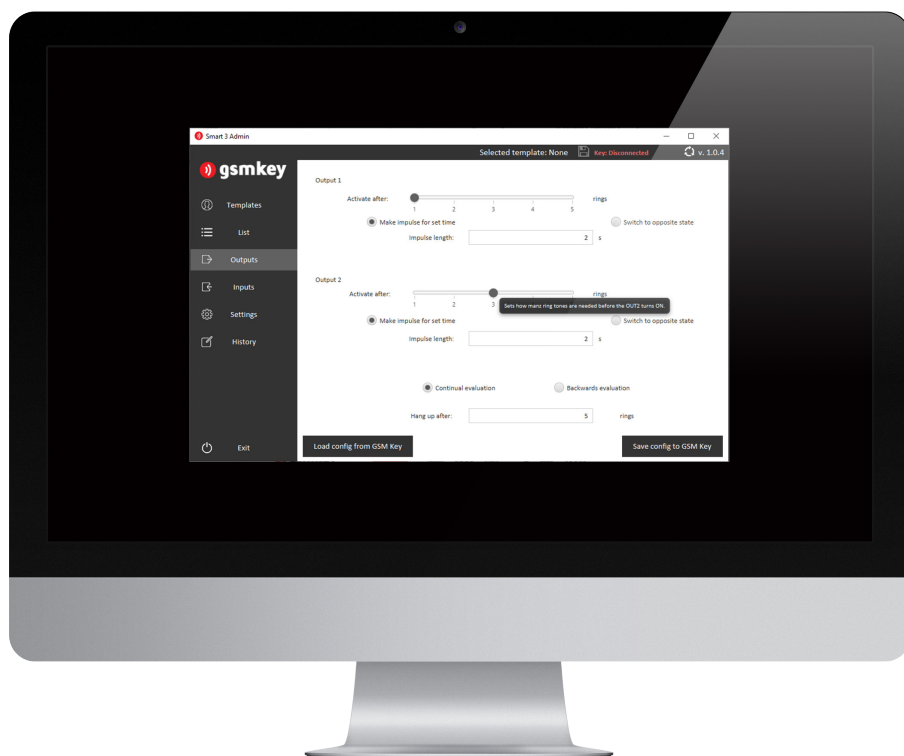

Advantages of GSM KEY versus conventional remote controls

- No more repair costs or buying new remotes
- Fast addition and removal of users
- No lost or stolen remotes
- Access control according to a phone number (access history)
