

SECTRON is an official authorized partner to sell and install TELTONIKA networking products designed to make your connectivity reliable, secure and quick to deploy. TELTONIKA products will help you build a solid IoT, M2M or enterprise networking infrastructure and advanced remote management capabilities will enable you to manage it with ease.

Portfolio Highlights

Teltonika Networks designed their product portfolio to help partners access opportunities within the rapidly growing IoT and Industrial IoT space. The portfolio consists of modems, gateways, routers, switches, and IoT platforms. Teltonika has grown to be one of the leaders of cellular IoT devices for industrial and professional applications. From automation, smart grid, to public transport connectivity – hundreds of thousands of Teltonika's networking products are currently at the heart of worldwide solutions.

Use Cases

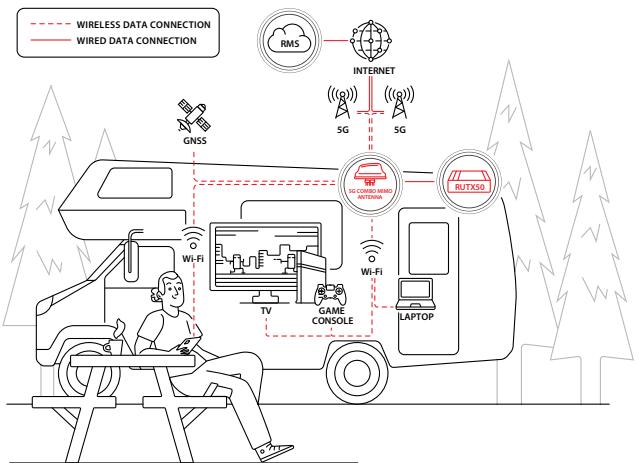

RUTX50 5G for Camper internet & Camping Wi-Fi

The RUTX50 is a 5G router with GNSS, capable of reaching cellular speeds of up to 3.3 Gbps and Wi-Fi 5 with data transmission rates of up to 867 Mbps. It also has 5 Ethernet ports for wired connections to any in-vehicle devices that could use the most minimal latency possible, such as a gaming console. Indeed, 5 is the magic number.

The RUX50 is packed with reliability features to keep your RV Wi-Fi seamless and uninterrupted. It isn't just another 5G router with a SIM card slot – it has 2 SIM cards slots and failover functionality. This not only keeps the connection running smoothly even if one of the cards is interrupted or if you cross the border, but it also saves costs on operator charges.

This 5G router is also capable of switching to 4G LTE Cat20 in case 5G isn't available at any given location, and can use both SA/NSA 5G architectures. Last but not least, Teltonika Networks offers a tailor-made 5G combo MIMO antenna that's the perfect RV Wi-Fi antenna for the job.

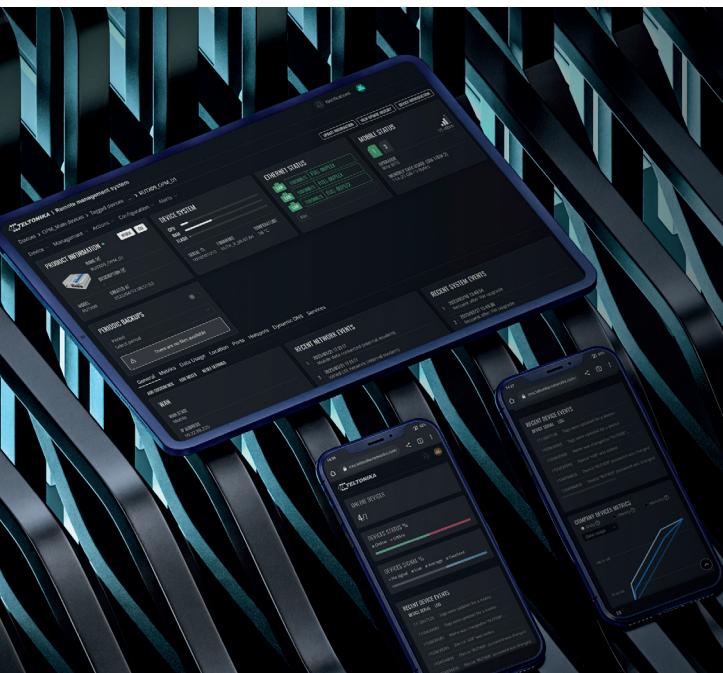

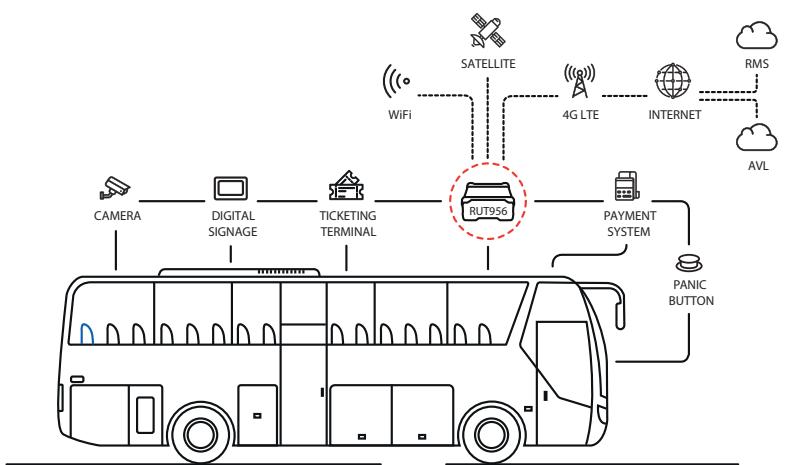

The RUTX50 is compatible with any type of RV battery, and does not require any special apps or complex installation. This 5G router is built to survive the harshest of environmental conditions, with a sturdy aluminum housing and resistance to vibrations and extreme temperatures between -40 °C to 75 °C.

RUT956 Case study for public transport

RUT956 by Teltonika is a single device able to address most onboard connectivity challenges with ease. It is favored amongst our partners in the transport field due to a reliable connection, which it is able to provide using auto switching dual SIMs, a large number of physical interfaces and E-mark certification ensuring full compliance with a number of important requirements when mounting additional devices in aftermarket automotive vehicles.

- Provides accurate location tracking services using an embedded GNSS module
- Connects up to seven 1080p30 CCTV IP security cameras due to robust and reliable Cat4 LTE
- Provides secure passenger hotspot with advertising and landing page for convenient and managed browsing
- Empowers Digital Signage screens across the vehicle for informational and advertising services
- Gives connectivity to existing or new ticketing terminals via Ethernet or Serial to ensure card payments or collect and upload ticketing statistics to operator's platform

Remote Management System

Teltonika Networks Remote Management System is an all-in-one, user-friendly IoT platform providing an easy way to stay on top of your connected solution. It is a powerful software that allows remote access and management of all connected Teltonika Networks and third party devices.

Management

Gain complete and secure control over your fleet of Teltonika networking devices—no public IP needed

Connection

Secure your entire remote infrastructure quickly and easily with robust VPN connections

VPN

Reach and remotely control your end devices connected to RMS compatible devices

Security

- Developed in-house, RMS ensures secure communication and data integrity by adhering to the strictest privacy and cybersecurity standards set by the European Union

Applications

- RMS VPN for direct VPN access and automatic client syncing
- Mobile app for iOS and Android
- Teltonika ID for two-factor authentication

Customization

- Adapt RMS to your solutions using custom control functions, alerts, and automation schemes

Availability

- RMS is free to start: creating a RMS account, adding Teltonika networking devices and testing its capabilities can all be done free of charge

Hosting

- Hosted on AWS: a leading cloud server synonymous with security, scalability and high availability

Pricing

Long-term or flexible licensing options for modular and cost-effective pricing

Capabilities

- Full management capabilities of supported Teltonika networking devices, including remote onboarding, custom alarms, firmware updates, automatic backups, performance analysis and more
- Secure and direct access to third-party devices via RMS Connect or VPN

RutOS

RutOS is an unified operating system based on OpenWRT used by all Teltonika-Networks devices. This system enables our customers to have an excellent user experience using Teltonika routers since all the devices are easy to use due to an intuitive interface. This system enables our clients to cut their cost on engineer training while implementing new devices. Moreover, it empowers to be flexible when migrating between different devices and platforms. Lastly, the system is open source, therefore, every client can change and adopt RutOS in order to get the most out of each and every Teltonika-Networks device.

Reliable

Enhanced uninterrupted connectivity and protocol support for your IoT needs

Secure

Full of security features and failsafes to ensure maximum device and network security

Easy to use

Streamlined and customisable UX for simple yet comprehensive management

TswOS

OpenWRT-based Linux OS designed for easy and comprehensive managed switch workflow

Seamless

Numerous DHCP options for enhanced network stability and control

Secure

Comprehensive authentication features for enhanced security and access control

Reliable

Remote port management, ensuring uninterrupted network performance
